

Peg Bar - 650mm. Approx 4.5kg

Product Images

Short Description

Peg Bar - 650mm. Approx 4.5kg

Description

We have designed our own peg bar with a far greater emphasis on strength around the head-to-shaft join. The design has the head drilled right through with the shaft inserted into it and heat shrunk into the head. Once the shaft is heated on, we add some welding around the shaft base to give it extra strength, rather than just relying on a top weld which is what most other peg bars on the market offer.
